35

Section
Table 3.3 Footnote 1

Table 4.3 Footnote 1

Table 4.3 Footnote 3

## Revision

Add the following: "For members with reference strength values listed in Table 3.3, $\mathrm{C}_{\mathrm{F}}=1.0$ for all properties and all sizes $12^{\prime \prime}$ in width and less. For sizes greater than $12^{\prime \prime}, \mathrm{C}_{\mathrm{F}}$ for $\mathrm{F}_{\mathrm{b}}$ is computed as $(12 / \mathrm{d})^{1 / 9} \leq 1.0$, where d is the depth of the member."

Add the following: "For dimension lumber wider than 12" (all grades except Dense Structural 86, Dense Structural 72 and Dense Structural 65), tabulated bending, tension and compression parallel to grain design values for 12 " wide lumber shall be multiplied by the size factor, $\mathrm{C}_{\mathrm{F}}=0.9$. When the depth, d, of Dense Structural 86, Dense Structural 72 or Dense Structural 65 dimension lumber exceeds 12 ", the tabulated bending design value, $\mathrm{F}_{\mathrm{b}}$, shall be multiplied by the following size factor: $\mathrm{C}=(12 / \mathrm{d})^{1 / 9} \leq 1.0 . "$

Replace with: "For members with reference strength values listed in Table 3.3, $\mathrm{C}_{\mathrm{F}}=1.0$ for all properties and all sizes $12^{\prime \prime}$ in width and less. For sizes greater than $12^{\prime \prime}, \mathrm{C}_{\mathrm{F}}$ for $\mathrm{F}_{\mathrm{b}}$ is computed as $(12 / \mathrm{d})^{1 / 9} \leq 1.0$, where d is the depth of the member."

Future updates will be available at http://www.awc.org

## 1999 ERRATA

to
1996 Edition of

# LRFD MANUAL FOR ENGINEERED WOOD CONSTRUCTION with the STANDARD FOR LOAD AND RESISTANCE FACTOR DESIGN FOR ENGINEERED WOOD CONSTRUCTION, AF\&PA/ASCE 16-95 

## Page Revision

139 In equation 5.1.4, "tan $\theta$ " in the third term of the denominator should be " $\tan ^{2} \theta$ ".
139 In paragraph 2 of section 5.1.11, remove "for use in equation 5.1-4".
$169 \quad{ }^{-K} \mathrm{~K}_{\mathrm{si}}$ " in A2.2.6 and A2.3.6 should be " $\mathrm{C}_{\mathrm{I}}$ ".
169 In section A2.3.6 reference to equations 5.4-4, 5.4-1, and 5.3-1 should be to equations 5.2-7, 5.2-4, and 5.2-2, respectively.

In equation C8.5-3, (EI)' should appear in the denominator where (EI)' is the adjusted flexural stiffness (kip-in. ${ }^{2} / \mathrm{ft}$ ). k constants for $\mathrm{C} 8.5-3$ should be 922 instead of 0.92 , 2220 instead of 2.22, and 1740 instead of 1.74 .

## 1999 ERRATA <br> to <br> 1996 Edition of

## LRFD MANUAL FOR ENGINEERED WOOD CONSTRUCTION with the STANDARD FOR LOAD AND RESISTANCE FACTOR DESIGN FOR ENGINEERED WOOD CONSTRUCTION，AF\＆PA／ASCE 16－95

## Page Revision

135 In equation 4．3－3，＂$\phi_{s}$＂should be＂$\phi_{s}$＂．
136 In Table 4．3－1，design diameter（ D ）should be defined as $\mathrm{D}=\mathrm{D}_{1}+\mathrm{X}\left(\mathrm{D}_{2}-\mathrm{D}_{1}\right)$ ．
136 In Table 4．3－2，design depth（d）should be defined as $\mathrm{d}=\mathrm{d}_{1}+\mathrm{X}\left(\mathrm{d}_{2}-\mathrm{d}_{1}\right)$ ．
137 In 4．5．2，beginning of third paragraph should be，＂When the length in bearing，$\ell_{\mathrm{b}}$ ，is no more than 6 in ．（150 mm ）along the member length and the full bearing length is at least 3 in ．$\left(75 \mathrm{~mm}\right.$ ）from the member end， $\mathrm{F}_{\mathrm{c} \perp}$ shall be permitted to be multiplied by $\mathrm{C}_{\mathrm{b}}$ ：＂

137 In denominator of equation 4．5－7，＂Fc $\perp$＂should be＂ $\mathrm{F}_{\mathrm{c} \perp}$＂．
140 Table 5．2－1 effective length factors should be：

| Span <br> Condition | Loading Condition | Bracing Condition | $\ell_{\text {e }}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\ell_{u} / \mathrm{d}<7$ | $7 \leq \ell_{\mathrm{u}} / \mathrm{d} \leq 14.3$ | $\ell_{\mathrm{u}} / \mathrm{d}>14.3$ |
|  | Any condition not listed below |  | $2.06 \ell_{u}$ | $1.63 \ell_{u}+3 \mathrm{~d}$ | $1.84 \ell_{u}$ |
| Cantilever | concentrated load at midspan | braced at ends only | $1.80 \ell_{u}$ | $1.37 \ell_{u}+3 \mathrm{~d}$ | $1.37 \mathrm{O}_{\mathrm{u}}+3 \mathrm{~d}$ |
|  | uniformly distributed load | braced at ends only | $2.06 \ell_{u}$ | $1.63 \ell_{u}+3 \mathrm{~d}$ | $1.63 \ell_{u}+3 \mathrm{~d}$ |
|  | concentrated load at unsupported end | － | $1.87 \ell_{u}$ | $1.44 \ell_{u}+3 \mathrm{~d}$ | $1.44 \ell_{u}+3 \mathrm{~d}$ |
|  | uniformly distributed load | － | $1.33 \ell_{u}$ | $0.90 \ell_{u}+3 \mathrm{~d}$ | $0.90 \ell_{\text {u }}+3 \mathrm{~d}$ |
|  |  |  | $\ell_{\text {e }}$ |  |  |
| Single Span of length L | Uniformly spaced concentrated loads one load | braced at each concentrated load： |  |  |  |
|  |  | $\ell_{u}=\mathrm{L} / 2$ |  |  |  |
|  | two loads | $\ell_{u}=\mathrm{L} / 3$ | $\begin{aligned} & 1.11 \ell_{u} \\ & 1.68 \ell_{u} \end{aligned}$ |  |  |
|  | three loads | $\ell_{u}=\mathrm{L} / 4$ | $1.54 \ell_{u}$ |  |  |
|  | four loads | $\ell_{u}=\mathrm{L} / 5$ | $1.68 \ell_{u}$ |  |  |
|  | five loads | $\ell_{u}=\mathrm{L} / 6$ | $1.73 \ell_{u}$ |  |  |
|  | six loads | $\ell_{u}=\mathrm{L} / 7$ | $1.78 \ell_{u}$ |  |  |
|  | seven or more loads |  | $1.84 \ell_{u}$ |  |  |
|  | Equal end moments | － | $1.84 \ell_{u}$ |  |  |

## Page Revision

143 Section 5.4.2 paragraph 3 should be, "Alternatively, for continuous or cantilevered bending members of sawn lumber, the adjusted shear resistance at locations at least three times the member depth from the member end shall be permitted to be determined using Eq. $5.4-1$ or the following:

$$
\begin{equation*}
V^{\prime}=\left(V^{\prime} \text { from Eq. 5.4-1 or } 5.4-2\right)\left(1+\frac{(x-3 d)}{3 d}\right) \text { but } \leq 2\left(V^{\prime} \text { from Eq. } 5.4-1 \text { or } 5.4-2\right) \tag{5.4-3}
\end{equation*}
$$

where x is the distance from the end of the member and $\mathrm{C}_{\mathrm{H}}$ is 1.0 for all members when using Eq. 5.4-3."
In section 7.4.3.1, paragraph two, "7.3-1" should be "7.4-1"
Equation 7.5-3 should be $\mathrm{Z}=\left(0.93 \mathrm{k}_{1} \mathrm{D}_{\mathrm{s}} \mathrm{F}_{\mathrm{es}}\right) / \mathrm{K}_{\theta}$.
In Table 7.5-2(a), yield mode "IIIm" should be " $\mathrm{III}_{\mathrm{m}}$ ".
In equation 7.5-10, " $\mathrm{F}_{\mathrm{tb}}$ " term should be " $\mathrm{F}_{\mathrm{yb}}$ ".
In equation $\mathrm{k}_{4}$ in Table 7.5-2(c), " $\mathrm{t}_{\mathrm{s}}$ " term should be " $\mathrm{t}_{\mathrm{s}}{ }^{2 "}$.
Equation for $\mathrm{K}_{\mathrm{gr}}$ should be: $\mathrm{K}_{\mathrm{gr}}=\mathrm{X}-\mathrm{Y}\left(\mathrm{d}_{\mathrm{c}} / \mathrm{R}_{\mathrm{m}}\right)$.

March 2002
1996 LRFD Manual Information

## Errata/Updates

Attached please find the latest Errata/Addendum to the 1996 Load and Resistance Factor Design (LRFD) Manual for Engineered Wood Construction. Note that any subsequent errata or updates will be made available to download free from the American Wood Council website at:
http://www.awc.org/Standards/lrfd.html

## Supplements

Note that the following Supplements are not included with this 1996 LRFD Manual:

Structural Use Panels<br>Structural Glued Laminated Timber

These Supplements are free to download in electronic format (PDF) from one of the following websites:

```
http://www.awc.org/Standards/lrfd.html
http://www.apawood.org
```

Note also that a new Supplement entitled ASD/LRFD Special Design Provisions for Wind and Seismic has been developed and is also available to download free from http://www.awc.org/Standards/lrfd.html. The provisions of this Supplement are based on the latest edition of ASCE's Minimum Design Loads for Buildings and Other Structures - ASCE 7.

Photocopies of these Supplements are also available on request for a nominal fee.

## ASCE 7 Load Combinations

The LRFD Manual contains the Standard for Load and Resistance Factor Design (LRFD) for Engineered Wood Construction, AF\&PA/ASCE Standard 16-95. Section 1.3 of the LRFD Standard states that, "Nominal loads shall be those required by the applicable building code. In the absence of a governing code, the nominal loads shall be those stipulated in ASCE 7-93." The Commentary to the LRFD Standard (section C1.4.3) provides additional discussion on this issue. A tabulation of load combinations for several versions of ASCE 7, along with guidance on their use, is available at http://www.awc.org/Standards/lrfd.html.

## LRFD Solved Example Problems for Wood Structures

A companion document has been developed for the LRFD Manual entitled LRFD Solved Example Problems for Wood Structures. It contains 40 design examples and complete solutions based on the LRFD Manual. More information on its availability can be found at http://www.awc.org/Standards/lrfd.html.
